

Halloween

NUS PHYSOC · THURSDAY, NOVEMBER 10, 2016

By Neville Chen

On 27th and 28th October, Science Club organised its annual Halloween event for the Faculty of Science (FoS). Student-led clubs and society under FoS were invited to set up booths along the walkway near the newly opened Science Student's Hub. The theme for this year's Halloween was 'The Last Train', inspired by the well-received movie 'Train to Busan'. Apart from the manning of booths, areas around our familiar campus were given a temporary facelift to create an atmosphere befitting of the event.

Publicity Poster for PhySoc

For the NUS Physics Society's (PhySoc) booth, we aimed to keep in line with the spirit of the theme this year and designed a game that combines the staples of zombie literature: zombies and more importantly, guns to shoot them with. The end results were zombie target boards with beacons for Laser Tag guns. Challengers were invited to shoot the zombies such that the colour on the beacons matched a pattern decided by our game masters. We also sold our all-time favourite spherical-cat shirt.

Proud of the team's work!

The Halloween event came at a time when many of us were slipping into the monotony of assignments and projects. Hence, it was a timely break from the boring routine. We had an enjoyable time designing the booths despite the short time frame we had to prepare.

Our booth and the masked man supervising it.

We would like to thank Science Club for organising this Halloween event and giving us an opportunity to contribute to the vibrancy of the campus. We also like to thank all members of the Science Faculty who supported us at our booth. Halloween may be a festival that inspires fear but, perhaps, this year's true Halloween falls on the 9 November.
